

ARGEȘ-VEDEA Water Basin Administration
Ilfov – Bucharest Water Management System

NATIONAL ADMINISTRATION "APELE ROMANE" (*Romanian Waters*)
ARGEȘ-VEDEA Water Basin Administration
Ilfov-Bucharest Water Management System
Outgoing no. 3899 dated 30 March 2020

Addressed to,
The City Hall of Sector 3 of Bucharest

Subject: Complex development of the Dâmbovița River in Bucharest City regarding the landscaping of the left bank

Following your letter no. 305101/12.03.2020, registered with the Ilfov-Bucharest Water Management System under no. 3540/17.03.2020, whereby you are asking for our agreement to organize a solutions competition regarding the execution of some landscaping and urban regeneration works of Splaiul Unirii on the section between Mărășești - Timpuri Noi - Mihai Bravu Bridges, on the left bank of the arranged riverbed of Dâmbovița river, we communicate the following:

1. Our institution manages only the clean water basin of the regularization of Dâmbovița river, delimited by the wave-breaking beams, a hydrotechnical work that is part of the public domain of the state.
2. The green space (stairs) between the wave-braking beam and the ornamental fence, the ornamental fence and the sidewalk, are administered by the General Council of Bucharest City.
3. The competition theme should take into account the locations of the access points from the road surface of Splaiul Unirii to the manholes of the waste water collection boxes placed under the clean water tank, as well as the location of the car access ramps on the road surface of the Splaiul Unirii on the foundation plate of the clean water tank that will be executed within the project "*Completion of the Glina Wasterwater Treatment Plant, rehabilitation of the main collector sewers and of Dâmbovița sewer (gutter)*", works authorized and started by the Bucharest City Hall.
4. As regards the consoles, which according to the proposal of the competition brief would be located above the body of water, we suggest you to include them in the brief only for the purpose of a treatment from an urban planning point of view, but for their effective implementation it will be required to solve the legal issues for making the land occupied by them available.
5. Furthermore, with regard to the consoles, please impose by the competition brief that the distance from the console's intrados to the water surface is at least 1.5 m so that there is enough space to perform the operations of mechanized aquatic mowing, of at least 2.5 m between the foundation plate and the elevation of the intrados, in order to allow the execution of intervention works with earthmoving machines, and so that the structure of the consoles can be temporary dismantled in cases of necessity (rehabilitations, interventions, etc.).

With a view to all these issues, please be informed that we have no objection to starting the solutions competition, but after establishing the winning solution, you have the legal obligation to submit the technical documentation in order to obtain the water management approval for the execution of the works, according to the regulations in force.

Thank you for your understanding and cooperation!
