Helli Pangalou is a landscape architect (MLA, University of Edinburgh 1996) and founder of HPA Landscape Architects.

HPA have collaborated with international design teams and have undertaken a wide range of projects in several sectors including Spatial and Urban Planning, Culture and Art, Education, Trade and Industry, Housing, Environment, Sport and Transport. Their portfolio includes private and public projects, ranging from large scale master planning to parks, office and commercial complexes, landscape restoration, hotels, resorts and residential projects.

As Lead Landscape Architect, Helli Pangalou holds more than 25 years of international design experience, exploring predominantly landscape design and placemaking as dynamic eco-systems that inform and enrich people's lives and experiences.

In her work, she emphasizes the significance of environmental resilience, the experience of immersion into the 'Topos', the identity of the diverse Mediterranean landscape in progress, within an ecologically sustainable design ethos driven by environmental clarity.

Under the guidance of Renzo Piano and in collaboration with Deborah Nevins, they were responsible for the landscape design of the Stavros Niarchos Foundation Cultural Centre SNFCC and the Stavros Niarchos Park, a reference project that received LEED® Platinum and several international awards.

Building on her research on the ancient Asklepieion of Epidaurus and the healing properties of landscape, she has been primarily involved in the landscape design of three major hospital infrastructures in Greece, with lead architect Renzo Piano Building Workshop, as part of the Stavros Niarchos Foundation (SNF) Health Initiative, a strategic intervention in the Greek Health sector.

She has lectured at universities around Europe, and she has participated in international conferences. She has edited books on landscape and Mediterranean ecosystems.
