STATE DIPLOMA IN ARCHITECTURE, RESEARCH SPECIALIZATION - HONORS FROM THE JURY - ENSA PARIS-VAL DE SEINE

Iris Chervet combines architecture and landscape, advocating for a transversal approach where attention to natural environments takes precedence over the organization of built environments and guides architectural choices. The aim is to restore the essential relationship between humans and their territory and to envision a symbiotic relationship between city and landscape. The studio relies on geography as the fundamental basis of urban planning, allowing for the projection of territorial transformations in light of current and future climate changes
